InterCompany for SAP Business One

Multi-entity accounting and reporting

Even the most sophisticated enterprises find multi-entity accounting and reporting complex and time-consuming. Data entry and spreadsheet calculations consume human resources and are prone to costly mistakes. InterCompany for SAP Business One automates and streamlines multi-entity transactions and processes to optimize financial operations, eliminate errors, and accelerate month-end close.

The Benefits of InterCompany Automations

Comply with regulatory mandates and corporate policies

Companies with multiple business entities must comply with intercompany accounting standards. Missed steps and inaccurate data entry put compliance at risk and compromise the integrity of every financial report.

InterCompany flags and automates intercompany transactions so businesses remain compliant.

Close the books faster

Using spreadsheets to perform multi-entity consolidations is time-consuming and often delays month-end close.

InterCompany automates those processes, eliminating manual tasks and accelerating consolidations.

Eliminate redundant data entry

A simple multi-entity transaction can splinter into manual, redundant data entry tasks.

InterCompany integrates siloed financial systems, allowing transactional data to move seamlessly between them.

Improve cross-functional collaboration

Optimizing your business's performance requires involvement at the transactional and strategic levels.

InterCompany's automated workflows and notifications facilitate collaboration between teams.

Provide on-demand access to accurate financial data

Multi-Entity companies must respond to business conditions in real-time. Many delay decisions until month-end.

InterCompany delivers anytime access to accurate financial data, empowering teams to respond confidently to changes on the fly.

Scale business operations

As transactions increase, the manual processes that once comfortably supported business operations prevent sustained growth.

InterCompany automations allow business operations to scale without errors for a fraction of the cost.
