

Connectors

Integrate, Automate, and Unify Your Enterprise

Unlike a patchwork point-to-point approach, a solid integration strategy extracts more value from your mission-critical business applications and processes. The Saltbox Platform from Vision33 is an enterprise-class, low-code integration as a platform (iPaaS) solution that empowers companies to integrate, unify, and streamline business operations, accelerating automation initiatives and increasing the ROI of their data and existing technology investments.

Saltbox Connectors Are the Building Blocks

The Saltbox Platform relies on its growing library of pre-built and utility connectors to integrate with any application, data set, or business process, whether it's on the cloud or on-premises. Existing connectors are customizable to address unique integration scenarios. A universal API connector accelerates custom integration projects for applications with standards-compliant REST APIs. Bespoke options are available for legacy and proprietary solutions.

Pre-built connectors accelerate integrations between popular, mission-critical business systems like ERP, CRM, marketing automation, and POS. As applications evolve, pre-built connectors update dynamically, preventing disruptions to business operations. They include a set of standard workflows and are easily customized to support any automation scenario. The pre-built connector library includes Shopify, WooCommerce, HubSpot, Salesforce, ShipStation, Zendesk, Magento, Smartsheet, and Concur Expense.

Utility connectors extend the functionality of workflows or connect to legacy applications that don't have modern APIs. Popular utility connectors include SQL, SFTP, SMTP/POP3, and file processing (e.g., JSON, CSV, and XML).

Workflows Automate Any Business Scenario

Workflows define and automate the flow, treatment, and delivery of transactional data between people and business systems. Pre-built connectors have a standard set of workflows that help you quickly automate common business processes and scenarios. They can be used as-is, customized, or, for more complex scenarios, developed from scratch.
