Saltbox for eGovernment

The Saltbox Platform is an enterprise-class, low-code integration platform as a service (iPaaS) solution used by state and local governments to seamlessly integrate business systems, synchronize data, and automate processes.

Born in the cloud, Saltbox meets modern technical requirements while delivering robust, easy-to-use functionality. The platform's extensible, flexible, and scalable architecture eliminates the constraints of legacy systems, limited resources, and process complexity.

Why Government Agencies Love Saltbox

Permitting and licensing systems

ePlan review software

Document management systems

Online payment processors

Microsoft Exchange

Accounting systems

And much more!

Saltbox seamlessly integrates your digital government solution with almost any business application or data set, including online payment processors, electronic plan review software, and document management systems. Its growing suite of connectors brings workflows to life through a visual, drag-and-drop interface, enabling you to get more value from existing technology investments.

Powerful workflows jumpstart transactions and direct data flow between systems to accelerate processes, reduce costs, and deliver real-time access to accurate data.

Saltbox offers a sustainable, centralized approach to integrating your business. It supports your immediate integration needs while enabling you to build a longer-term strategy, eliminate cumbersome point integration tools, and reduce overall integration costs.

Key capabilities and features

- Add, remove, or upgrade business systems without "breaking" integrations and workflows
- Integrate two or more modern, legacy, or proprietary systems to streamline processes and synchronize data
- Eliminate manual data entry, cumbersome processes, and siloed data sets
- Pre-built app and utility connectors
- API gateway for real-time integration scenarios
- Low-code environment reduces reliance on developer resources
- Operational dashboards and alerts
- Powered by Amazon Web Services (AWS)
- Built for business agility and ease of use
- Enterprise-grade data governance and security capabilities

Business Benefits

- Automate manual processes
- Fast time to value
- Boosts operational efficiency
- Increases life span and value of existing IT investments
- Reduces capital expenditures by consolidating integration tools
- Improve data integrity, reduce data silos and data duplication
- Reduce operational and IT support costs

Vision33 keeps things simple by focusing on what matters most to our clients—services grounded in industry best practices. These services span the technology lifecycle, from planning, development, delivery, and change management to full operational support in the form of outsourced managed services.

What does this mean for you? You get the full support of a professional consulting organization that cares about your long-term success.

The Right People, Processes, and Technology

Regardless of your agency's location, we've got you covered. Vision33 employs over 450 multidisciplinary IT professionals and support staff across 30 locations in Canada, the USA, Europe, and Argentina.
